## DETAILED ACTION

### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Carl Oppedahl, Reg. No. 32,746 on November 17, 2004.

2. The application has been amended as follows:

In the claims: Please amend claims 1-4 as follows:

- 1: A power supply unit controller for a rack enclosure in which a plurality of devices communicate via a backplane, said controller comprising:

means for reading at least one signal indicative of an output supply level being provided to said backplane by a power supply unit associated with said power supply unit controller;

memory for storing at least one value associated with a respective one of the at least one signal;

means for communicating said at least one value to one of said devices; and

means for receiving power for said power supply unit controller from said backplane;

further characterized in that one of said devices is an Enclosure Services processor arranged to communicate with a bus controller through one of a SCSI Enclosure Services (SES)

Art Unit: 2115

or a SCSI Access Fault Tolerant Enclosure (SAF-TE) protocol and said power supply unit controller is adapted to communicate with said Enclosure Services processor.

2: A rack enclosure including:

a backplane,

at least one power supply unit connected to and adapted to supply power to said backplane, each associated with a respective power supply unit controller according to claim 1, and

a plurality of devices receiving power from said backplane, at least one of said devices adapted to communicate with the at least one power supply unit controller;

further characterized in that one of said devices is an Enclosure Services processor arranged to communicate with a bus controller through one of a SCSI Enclosure Services (SES) or a SCSI Access Fault Tolerant Enclosure (SAF-TE) protocol and said power supply unit controller is adapted to communicate with said Enclosure Services processor.

3: Please cancel claim 3.

4: A power supply unit controller for a rack enclosure in which a plurality of devices communicate via a backplane, said controller comprising:

means for reading at least one signal indicative of an output supply level being provided to said backplane by a power supply unit associated with said power supply unit controller;

Art Unit: 2115

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

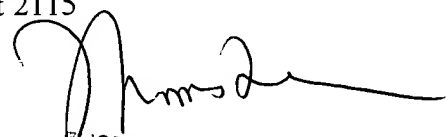

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mark Connolly whose telephone number is (571) 272-3666. The examiner can normally be reached on M-F 8AM-5PM (except every first Friday).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thomas C Lee can be reached on (571) 272-3667. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

memory for storing at least one value associated with a respective one of the at least one signal;

means for communicating said at least one stored value to one of said devices; and

means for receiving power for said power supply unit controller from said backplane;

further characterized in that one of said devices is an Enclosure Services processor arranged to communicate with a bus controller through one of a SCSI Enclosure Services (SES) or a SCSI Access Fault Tolerant Enclosure (SAF-TE) protocol and said power supply unit controller is adapted to communicate with said Enclosure Services processor.

3. Pursuant to MPEP 606.1, the title has been changed to read:

**-- A SYSTEM FOR COMMUNICATING A SIGNAL TO A DEVICE  
INDICATING AN OUTPUT SUPPLY LEVEL BEING PROVIDED TO A BACKPLANE  
FROM A POWER SUPPLY UNIT --**

***Conclusion***

4. The following is an examiner's statement of reasons for allowance:

- US Pat No. 5842027 to Oprescu et al teaches a system for monitoring a supply output and communicating a value representative of that output level to a device [figs. 1-2 and abstract, col. 6 lines 42-48, col. 7 lines 10-16 and col. 8 lines 1-65].

The prior art of record does not teach or suggest individually or in combination an enclosure services processor arranged to communicate with a bus controller through an SES or SAF-TE protocol.
